ULTIMA ARBOR

Our all new “Swiss Shield Arbor” fabric

Spearheading the ecological and sustainable aspect in the field of micro radiation shielding fabrics, Swiss Shield introduces our latest shielding fabric development made with ecological viscose fibres, using “Ecovero” viscose fibres from Lenzing (www.ecovero.com/). Our new fabric joins the already existing line-up of Swiss Shield cotton fabrics with the same excellent shielding performance and the outstanding handle and touch for which Swiss Shield fabrics are so famous for. Considering the omni present environmental awareness and problematic environmental impact of Polyester, we at Swiss Shield decided to replace all our polyester Swiss Shield fabrics in our range with fabrics made of Ecovero viscose fibres.

Therefore, we proudly can state that Swiss Shield once again leading the way in offering only natural and natural based environment friendly products in the field of technical advance shielding fabrics.

For more info's and technical specification, please refer to:
